To remove extremely short trips, all trips less than 1 mile were excluded from this calculation. The downward trend between raw dynamometer, window-sticker, and on-road results appears similar to that of gasoline hybrid vehicles; however a more complete analysis and comparison will be performed in the future. Fuel Economy Results: Dyno, Window-Sticker, and On-Road The vehicle driving range is a calculated number based on the chassis dynamometer fuel economy ( combined ) and the usable hydrogen stored on board the vehicle. The driving range shown in Figure 13 is between 122 and 223 miles, with the bar representing four data points, one for each team. It is important to note, however, that the longest driving range is not necessarily from the highest fuel economy vehicle since the amount of hydrogen stored on-board is independent of vehicle efficiency. The vehicle driving range data indicate that improved H2 storage technologies...
